Fairfax Tree Rescuers PRISM

By Margaret Fisher

PORCELAINBERRY COVERS ALL. PHOTO BY MARGARET CHATHAM

November 8-16 is a "Week of Action" in Fairfax and Falls Church. Volunteers in every magisterial district and town are inviting elected officials and the general public to events to work on the invasive plants that so threaten our trees and natural areas. This marks the official launch of the new Fairfax Tree Rescuers PRISM. https://www.fairfaxprism.org/

A "PRISM" — Partnership for Regional Invasive Species Management — is a collaborative effort by agencies and non-profit organizations to control one or more invasive species, whether flora or fauna. Many readers of this newsletter are familiar with the Blue Ridge PRISM, which has led the way in Virginia to educate the public on invasive plants and to push for improved public policy. Northern Virginia is also served by the National Capital Area PRISM, a program of the Metropolitan Council of Governments which

Upcoming

Potowmack Chapter Annual Meeting

Sunday, November 9
12:30 pm Social time
1:00 pm Business Meeting (see p 3)
1:30 pm Laura Beaty & Donna Murphy show us how to collect & save seeds.
In person in the Horticulture Center at Green Spring Gardens Park.
No registration needed.

Nature Journaling at Green Spring Gardens with Jen Brown

Friday, Nov 14, 10 am - noon Space limited: register under events on the Potowmack Chapter part of <u>vnps.org</u>

Annual Solstice Walk

Sunday, December 21, 11 am - 3 pm Travilah Serpentine Barrens Conservation Park in Montgomery County, MD. No registration required, but car-pooling advised. No restrooms. Co-sponsored by Maryland Native Plant Society, VNPS Potowmack Chapter, and Botanical Society of Washington.

Charles Smith: Light Eaters and the Mother Tree: Exploring what plants are and are not

Thursday, January 8, 2026, 7 pm We rely on plants for food, shelter, and many other functions. We learn early that they convert sunlight to energy, but we often remain largely "plant blind;" allowing them to form a backdrop for our lives with little understanding or appreciation. This program will lead us on a journey considering research and discussions over the last fifty years that have sometimes tried to assign plants human qualities, but have also discovered many things plants do that redefine what they are.

By Zoom; watch for registration info.

All events are free and open to the public.
Walks require preregistration. To receive
email notices about upcoming events,
subscribe to our mailing list at https://vnps.groups.io/g/potowmack You can also
send a blank email

to potowmack+subscribe@vnps.groups.io

Manage your VNPS Membership Online

- 1. Go to https://vnps.app.neoncrm.com/login

David Gorsline writes

Since I like to pick apart scientific names of plants, let's look at the specific epithet of Spicebush (*Lindera benzoin*), whose fruits have ripened to red here in the mid-Atlantic. That *benzoin* is interesting; it suggests *benzene*. Do they have something in common? And which came first?

Well, it's easy to figure out which came first, as Linnaeus named the plant in the 18th century, while Kekulé worked out the structure of benzene (the simplest aromatic hydrocarbon) in the 19th century, after Michael Faraday and others first isolated the chemical and named it earlier in that century. Benzene (benzin, benzol) is chemically derived from benzoic acid, which in turn is made from gum benzoin. Gum benzoin, known since antiquity, is an aromatic resin made from the bark of several species of trees in the genus *Styrax*.

So where did the word *benzoin* come from? Doesn't sound very Latin. It's traced back to Middle French *benjoin*, to Catalan *benjuí*, to Arabic لُبَان جَاوِيّ (lubān jāwiyy, "Javanese frankincense").

And just to bring it back home, we have two native species of *Styrax* in Virginia, American Snowbell (*S. americanus*) and Bigleaf Snowbell (*S. grandifolius*). Both are found in the southern counties of the state.

Editor's note: *Flora of West Virginia* says Lindera is named for Swedish physician J. Linder, 1676-1739, and benzoin is an old name for some member of this family..

FAIRFAX TREE RESCUERS PRISM CONTINUED FROM P 1 focuses on Early Detection/Rapid Response (EDRR). The Northern Neck PRISM was founded last year and is focusing on education in that region. Fairfax Tree Rescuers PRISM is the fourth and most recent of these organizations, with the goal of creating a community-wide effort to save the trees and control at least the worst of the invasive plant infestations.

The motivation for forming Fairfax Tree Rescuers is the observation that, despite years of concentrated effort by numerous organizations and hundreds and hundreds of individuals, it is clear that we are steadily losing the battle against invasive plants. There is good reason to fear that by the end of this century, many of our parks and remnant natural areas will lie in ruin, with the trees down and not replaced. A comprehensive approach is clearly needed, not only ramping up the current efforts but finding new ways to address the problem on all lands, whether public, residential, or commercial.

The job of the organizers is to look at the bigger picture and find ways to overcome the many barriers to success that exist. The job of every resident is to take care of their own properties and to take responsibility for the roadside rights of way and nearby public lands whose managers do not have the budget to pay for the work. One strategy for achieving that is for volunteers to relay information to their neighbors and help them get organized. It is our goal to have such a Community Representative in every neighborhood and community association. That will take many hundreds of volunteers! If everyone reading this comes forward, we will be well on our way to meeting that goal. If you can't do it yourself, please recruit someone else from your neighborhood to step in. Sign up on this volunteer interest form to give us your location and to tell us about any other ways you can pitch in.

Other strategies include working with governments on a major public awareness campaign, providing incentive grants to communities, recruiting corporations to adopt parks to pay for professional contractors, training lawn and landscapers as well as the volunteer workforce, providing site visits for communities and commercial entities, and surveying the parks for the most serious infestations. Getting this together is a daunting proposition. What will you do to help? We are convinced that most of the obstacles are human-made and that it is not yet too late to solve them. All that is needed is enough people who have the will to make it happen.

A Bath for the Pollinators

By Donna Murphy

It's not often a tree is replaced by a birdbath. A unique water feature was built from what was, until recently, the large Redbud tree in the VNPS beds at Green Spring Gardens. Horticultural staff cut the ailing

tree and left the stump, a crotch with three main limbs, to form an interesting, three-legged pedestal that begged to be adorned.

Then Karl Dawson, Fairfax County Park Authority, Facilities and Grounds Chief and Arborist at Green Spring Gardens, hatched the idea for this clever bird or insect bath.

"It was such a dry August I wanted to put a little bird bath together that mimicked a stream or pond side, so insects could grab a drink! I also did not want to dig out the stump of the dead redbud I removed," he said. "The insects will have everything they need [here] in one place, water, food, shelter.

Karl Dawson is a newcomer to Green Spring Gardens, but not to Arlington, where he grew up and went to Yorktown High School. He graduated with a degree in biology from University of Mary Washington in Fredericksburg. Karl then relocated to the state of Oregon and worked in Community Urban Forestry and then Utility Forestry -- think Asplundh – involved in risk management and customer relations. In 2021, he returned to his hometown, where his interest turned to the landscape. He has been the Facilities and Grounds Chief and Arborist at Green Spring Gardens for six months. We welcome Karl and thank him for his interest and empathy for the gardens' creatures.

Karl Dawson with his bee bath, perched in carefully notched right angles in the tree stump. The beautiful blue pool, with a carved wooden bowl of small gravel and flat rocks for sunbathing, provides water and safe passage to creatures who fall in and can't get out.

Peas in a Pod — or Not

The Fabaceae or Leguminosae family is large and various, including trees, vines both woody and herbaceous, and forbs. Here are some of their fruits, all local but not all native: an asterisk indicates a plant not native to Northern Virginia. Carrie Blair disagrees with the asterisk for #5, native in TN & NC. Photos by Margaret Chatham. Answers on page 6.

Word of the Month: Loment

An indehiscent legume (dry fruit of one carpel usually dehiscent along both sutures) constricted between the seeds or separating into one-seeded joints — as defined in *The Flora of West Virginia*. Desmodium paniculatum or Panicled Tick-Trefoil shown above, *Hylodesmum nudiflorum* or Naked Tick-trefoil below: "naked" because the flowering stalk bears no leaves. These are velcro seeds, and the number of seeds in a string as well as the shape of the seeds are supposed to help you identify which Tick-Trefoil you're looking at or pulling off your clothes. — Margaret Chatham

Answers to puzzle on page 5: 1-E, one sees the leaves and vines often, flowers and pods rather rarely; 2-L, pods turn black and rattle when ripe; 3-F, flowers and green pods are edible; 4-G; 5-I, native to Tennessee and North Carolina, but not Virginia though it's perfectly happy to grow here; 6-K; 7-D; 8-B, this may have originated farther west, but it is listed as native throughout Virginia in the Digital Atlas of Virginia Flora; 9-J; 10-H; 11-A, one of these invaded my yard years ago & reached seeding stage before I identified it — when we cut it down, its wood was the heaviest I've ever lifted; 12-C, the biggest pods here.
